
Specialist Solutions

The division

For the jobs others won't take on.

Specialist Solutions takes on the jobs that need the right accreditation, the right method and the nerve to do them properly: graffiti and acid-etch removal, protective coatings, heritage cleaning and floor safety. Difficult, regulated, high-stakes work, in environments where there's no room to get it wrong. The kind of work that's built our reputation and keeps building it.

The group behind it.

Specialist never works alone. Behind every job sits a single **accountable team, our own crews and the wider capabilities of the group. One brief covers everything, handled start to finish.**

The group advantages

01

Accountability

One line of accountability, from first brief to final sign-off.

02

Team

Our own teams, including working at height and out-of-hours.

03

Group operation

Project management and surveying handled at group level.

04

In-house capability

Comprehensive in-house capabilities, nothing out of reach..

A worker wearing a white hard hat, safety glasses, a respirator mask, and gloves is using a red power tool to clean a window. The worker is focused on the task, and the background shows a blurred outdoor scene.

Removal & Cleaning

Taking damage off surfaces: graffiti, acid etching and the soiling that builds up over years. Restoring what's underneath without harming it.

Graffiti removal

Gone without a trace.

Graffiti is a magnet for more. The longer it stays, the worse it gets. We remove it from brick, stone, glass, metal and rendered surfaces using the right method for each, so the tag goes and the surface underneath doesn't.

- Removal from any substrate, without damage.
- Rapid response to limit repeat targeting.
- Safe on heritage, painted and delicate surfaces.

Acid etch removal

Etching, polished out.

Acid etching and scratching ruin glass and polished surfaces, and unlike graffiti, you can't just wash it off. We remove or polish out the damage where it can be saved, and replace where it can't, restoring clarity and finish.

- Polishing and resurfacing to remove etch damage.
- Glass, mirror and polished stone.
- Restoration where possible, replacement where not.
- Better environmental solution.

Heritage cleaning

Clean, with care.

Historic and listed surfaces can't take a heavy-handed clean. The wrong method does lasting damage. We clean stone, brick and masonry to lift soiling and staining gently, preserving the surface and the character of the building.

- Gentle, substrate-appropriate cleaning methods.
- Stone, brick and masonry on listed and historic buildings.
- Soiling, staining and biological growth removed safely.

Protection & Coatings

Stopping the damage before it starts:
protective coatings and films that take the
hit, so the surface beneath doesn't have to.

Anti-graffiti coatings

The hit it takes for you.

An anti-graffiti coating is the difference between a quick wipe-down and a full removal job. We apply sacrificial and permanent coatings that stop paint bonding to the surface, so when graffiti lands, it comes straight back off.

- Sacrificial and permanent coating systems.
- Graffiti wipes away without harming the surface.
- Protects brick, stone, metal and signage.

Asset protection

Built to take the wear.

Public and high-traffic assets take a beating from vandalism, weather and daily wear. We protect them with coatings and treatments that extend their life and keep them looking maintained. Where a part is past protecting, we replace it in full, including GRP stair treads and handrails.

- Protective coatings and treatments for exposed assets.
- Full replacement of GRP stair treads and handrails.
- Longer asset life and fewer repeat repairs.

Glass protection

One film takes the damage.

Glass is expensive to replace and a favourite target for etching and graffiti. A sacrificial film takes the damage in its place. When it's vandalised, you replace the film, not the glass, reducing costs and saving the environment.

- Sacrificial anti-graffiti and anti-etch film.
- Damage hits the film, not the glazing.
- Replace the film at a fraction of glass cost.

Floor Safety & Surfacing

Floors that hold up underfoot: tested, treated, surfaced and marked to keep people safe and sites compliant.

Slip safety

Proven safe underfoot.

Slips are the most common cause of workplace injury, and the easiest to defend against with evidence. We test floors to PTV standard and treat with anti-slip systems, giving you safer surfaces and the documentation to prove it.

- PTV pendulum slip testing to recognised standards.
- Anti-slip coatings and treatments; UV floor curing.
- Certified results for compliance and liability.

Surfacing & marking

Laid to last.

The right floor surface does more than look the part. It defines safety, flow and wear over years of use. We lay safety flooring and surfacing, and mark it out for clear, compliant navigation.

- Floor surfacing and safety flooring systems.
- Line marking for wayfinding and demarcation.
- Hard-wearing finishes for high-traffic environments.

Where we work

Specialist work goes where the stakes are highest: regulated, public-facing and unforgiving of mistakes. Our track record runs across the environments that demand the most.

Rail & transport

RISQS-approved removal and protection across the network.

Heritage & listed buildings

Gentle methods for stone, brick and masonry.

Local authority & public realm

Graffiti and damage cleared from public space.

Commercial & retail

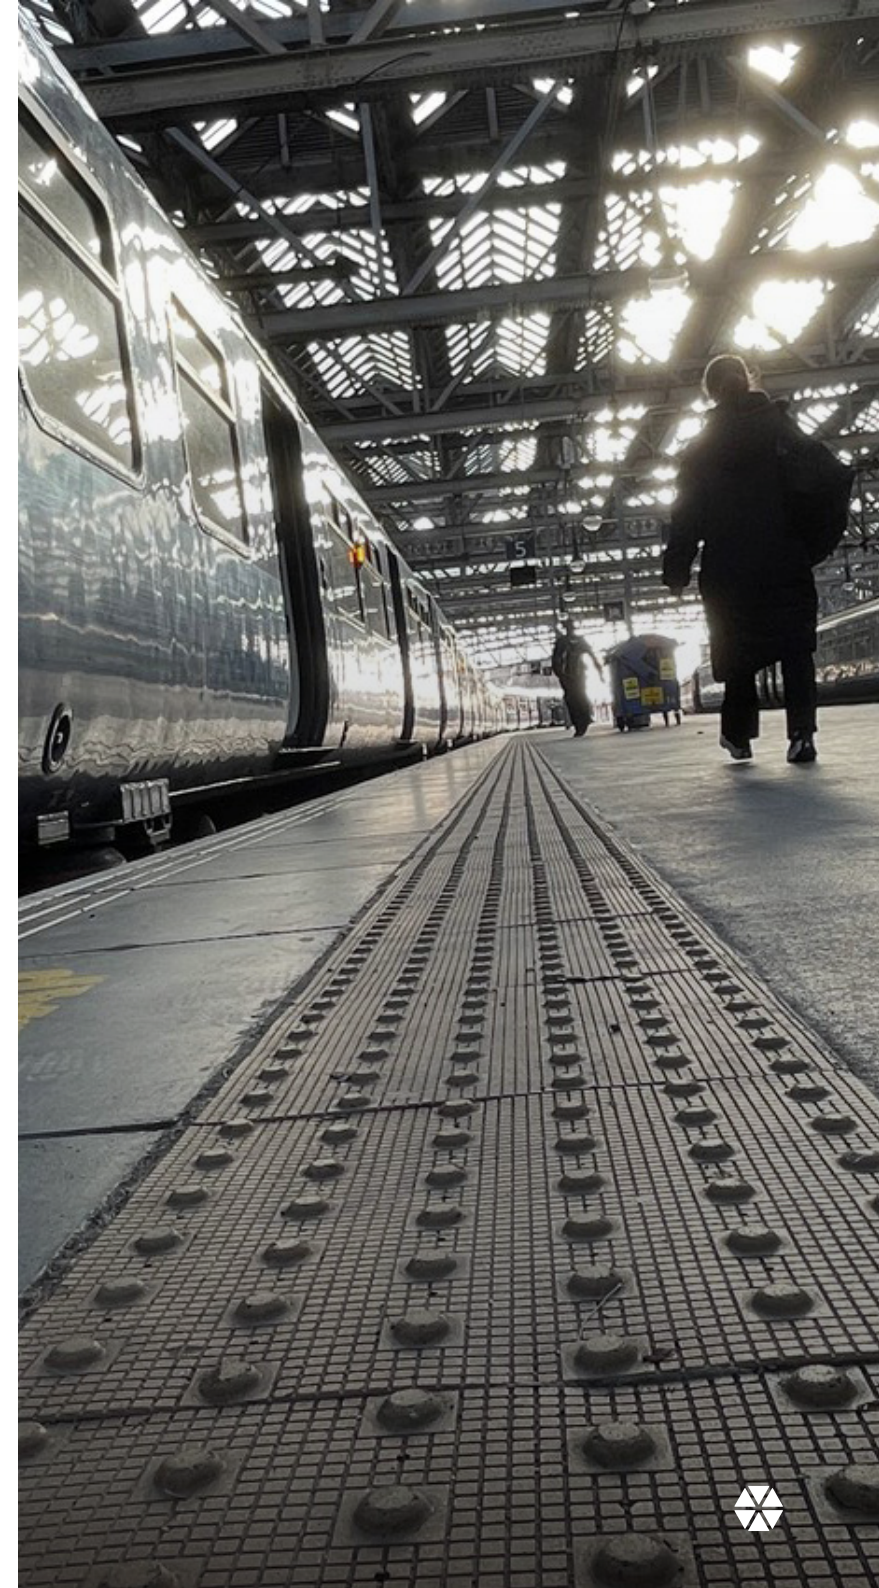

Frontages and glazing kept clean and protected.

Education

Safe, well-kept campuses, vandalism dealt with fast.

Leisure

High-traffic floors and surfaces kept safe and compliant.

Let's talk

Whatever others won't take on, there's one team that will.
Let's talk about the work that matters.
